Video Settings in Mac

1) Connect the cable to both ends

2) Select the Mini DP input on the display

3) Open the **Apple Menu** on your computer

4) Select **System Preferences**

5) Click the **Displays** icon

6) Click the **Arrangement** tab
7) Choose to **Duplicate** or **Extend** the display

- ◆ **DUPLICATE** the display: Check 'Mirror Displays' box
- ◆ **EXTEND** the display: Drag the display box to the desired position
- ◆ **TOP WHITE BAR**: Drag it to the other display to change the primary screen

Audio Settings in macOS (for a display with audio support)

1) Open the **Apple** Menu

2) Select **System Preferences**

3) Click the **Sound** icon

4) Click the **Output** tab

5) Select the connected display with **Mini DP**

6) Adjust the volume at the connected display

- ◆ Check the technical specifications of your display to verify if it supports audio input over Mini DisplayPort, requires a separate audio cable, or does not support audio at all

Cable Matters

Troubleshooting Tips

Thunderbolt 2 Port ✔ → Mini DisplayPort Device
Mini DisplayPort Port ✘ → Thunderbolt 2 Device

CABLING

- Check that all cable connections are secure
- Test the cable with a different port or computer, if possible

COMPUTER SOURCE

- This is NOT a Thunderbolt 2 cable. It does not support Target Display Mode
- Check for updated OS and video graphics card drivers for Mini DisplayPort
- Try different video resolution and refresh settings supported by the connected display
- Verify that the audio from your computer is not muted or extremely low
- Reboot the computer after making multiple changes

CONNECTED DISPLAY

- Select the Mini DisplayPort input from the connected display menu
- Adjust the audio level with your remote or from the display menu
- Check that your display supports audio
- Check for firmware updates and troubleshooting from the display manufacturer
